### **Broccoli**

## Brassica oleracea var italica Brassicaceae/ Cruciferae

The word broccoli came from 'brocco' (a Italian word means shoot)

This is not so much popular vegetable in our country. It is mostly cultivated in hilly regions of Himachal Pradesh, Jammu Kashmir and Uttar Pradesh and Nilgiri hills.

### Uses

- Both heads and fleshy stems are eaten as salad or cooked as single or mixed vegetables with potato.
- It has 130 times more vitamin A than cauliflower and 22 more than cabbage.
- It has anticarcinogenic property. It is a rich source of sulphoraphane a compound associated with reducing the risk of cancer.
- It is also beneficial in heart disease
- It is used to prepare salad, soup, curry, pie, cassarole etc.
- Boiling more than 10 minutes reduces its nutritional content.

- Terminal growing point and axils of leaves bear cluster of flower buds
- harvested before opening of flower bud
- USA is the largest producer
- ideal crop for protected cultivation

#### Varieties:

- Purple, white, pale green, dark green
- Early (60-70d), mid (90-110d), late types (110-120d)
- Pusa Brocccoli KTSel 1
- Palam Samrudhi
- Punjab Broccoli

Cultivation practices similar to cabbage

- It is sensitive to temp. and warm weather causes small thin leaves and loose heads
- The opt. temp. for growth is 20° to 30 °C for early and 5 to 10° C for late types.
- Optimum temp. for heading is 15-20° C

- The sowing time is September to mid November in north India.
- Both direct sowing and transplanting methods are used.
- In direct sowing 2 to 2.5 kg. seed per ha is needed and for transplanting, seed rate is 500 to 600 g/ha.

Flowers

Seeds

- After harvesting heads are kept in dark place for sometime otherwise they become yellowish
- Yellowing can be checked by storing in O<sub>2</sub> free chamber or aplication of BA @ 10 ppm or 2,4,5-T @ 2-4 ppm 3-4 days before harvesting.

### Diseases

Garminated seed killed or

**SYMPTOMS** 

**DISEASE** 

**CONTROL** 

(Pythium, Phytophthora, Rhizoctonia spp.)	seedlings topple down due to collar rotting	ii.	Thiram or Captan@seed Spray 0.2% Dithan 45 Soil sterilization
2. Downy Mildew (Pernospora parasitica)	Fluffy downy growth on lower surface and purplish or yellow brown spots on upper surface of leaves	i. ii.	Seed treatment in h water at 50°C for 3 Spray 0.3% Dithan or Ridomil-72
3.Yellowing (Fusarium oxysporum fsp. coglutinans)	Yellowing of leaves starting from lower leaves leading upward fast	i. ii.	Seed treatment 0.2% Carbendazim Benlate

4. Club root  (Plasmodiophora brassicae)  Swelling of roots causes club shaped rootlets  i. Drenching of seed beds with 1% formeldehyde ii. Liming to correct soil pH as it is more in acidic soils  5. Black leg (Phoma lingam)  Seedlings topple over due to distortion of vascular bundle and root system  ii. Seed treatment iii. Hot water treatment iii. Spray 0.2% Dithane M-45  6. Black rot (Xanthomonas campestris)  V shaped lesions with brown veins on leaf  ii. Hot water treatment iii. Seedling treatment with 0.01% Streptocycline iii. Spray 0.01% Streptocycline  7. Soft rot (Erwinia carotovora)  Water soaked patches on head which later turn dark brown  As black rot	DISEASE	SYMPTOMS	CONTROL	
(Phoma lingam)  distortion of vascular bundle and root system  ii. Hot water treatment iii. Spray 0.2% Dithane M-45  V shaped lesions with brown veins on leaf  iii. Hot water seed treatment iii. Seedling treatment with 0.01% Streptocycline iii. Spray 0.01% Streptocycline  7. Soft rot  (Erwinia carotovora)  Water soaked patches on head which later turn dark  As black rot	(Plasmodiophora	~	with 1% formeldehyde ii. Liming to correct soil pH	
(Phoma lingam)  distortion of vascular bundle and root system  ii. Hot water treatment iii. Spray 0.2% Dithane M-45  V shaped lesions with brown veins on leaf  iii. Hot water seed treatment iii. Seedling treatment with 0.01% Streptocycline iii. Spray 0.01% Streptocycline  7. Soft rot  (Erwinia carotovora)  Water soaked patches on head which later turn dark  As black rot				
(Xanthomonas brown veins on leaf  ii. Seedling treatment with 0.01% Streptocycline  iii. Spray 0.01% Streptocycline  iii. Spray 0.01% Streptocycline  7. Soft rot (Erwinia carotovora) Water soaked patches on head which later turn dark  As black rot		distortion of vascular bundle	ii. Hot water treatment	
(Xanthomonas brown veins on leaf  ii. Seedling treatment with 0.01% Streptocycline  iii. Spray 0.01% Streptocycline  iii. Spray 0.01% Streptocycline  7. Soft rot (Erwinia carotovora) Water soaked patches on head which later turn dark  As black rot				
(Erwinia carotovora) head which later turn dark	(Xanthomonas	-	ii. Seedling treatment with 0.01% Streptocycline iii. Spray 0.01%	
(Erwinia carotovora) head which later turn dark				
		head which later turn dark	As black rot	

INSECT	SYMPTOMS	CONTROL	
1. Cabbage butterfly (Pieris brassicae)	Bluish green caterpillars feed on leaves starting from margin to centre	<ul> <li>i. Grow paired mustard rows after every 25 row of crop</li> <li>ii. Spray 0.03% Fenvelerate or Cypermethrin</li> </ul>	
2. Cut worm (Agrotis ipsilon)	Caterpillars cut down the young seedlings just above the ground level	<ul> <li>i. Clean cultivation</li> <li>ii. Destruction of big soil clods</li> <li>iii. Soil application of Aldrin  @ 20 kg/ha</li> </ul>	
3. Cabbage aphids (Brevicoryne brassicae)	Nymphs and adults suck the sap from leaves and causes sooty mould	Spray 0.03% Dimethoate or 0.05% Methyl demeton	

INSECT	SYMPTOMS	CONTROL
4. Diamond back moth (Plutella xylostella)	1cm long greenish caterpillars feed on the lower side of leaves producing whitish patches and make holes	As cabbage butterfly
5. Cabbage flea beetle (Phylloterata cruciferae)	Grub feed on tender roots and adult is bluish green, 1.5-2cm long and make small round holes in leaves & stem	Spray 0.2% Carbaryl

# **Brussels sprout**

Brassica oleracea var gemmifera Brassicaceae/Cruciferae

- Name from Brussels in Belgium where it was cultivated since 15<sup>th</sup> century
- Miniature cabbage like growth in the axils of leaves all along stem
- Used as cooked vegetable, salad
- Two groups Dwarf and tall
- Dwarf: stem 50cm long
- Sprouts crowded on the stem
   Suited to areas where season is short.

Improved Long Island

**Dwarf Improved** 

Early Morn, Jade cross

Tall: suited at areas where season is long

Hilds Ideal

Red Vein

Amager Market

- Climate: temperature 16-20oC
- Cultural practices are same as cabbage
- seed rate=300-400g/ha
- Spacing=90x90cm
- Harvest: first formed leaves mature (sprouts solid, uniform, outer leaves folded closely)
- De topping found beneficial in dwarfs and hybrids
